# WellDefined WebPortal

Web Interface to Simplify and Streamline Survey  
Correction Interactions

## APPLICATIONS

- IFR1, IFR2 and GRS
- SAG and DSAG
- High Definition TVD
- Real-Time Multi-Station
- Post-Run Multi-Station
- Survey QC/QA
- Failure Analysis
- Collision Avoidance

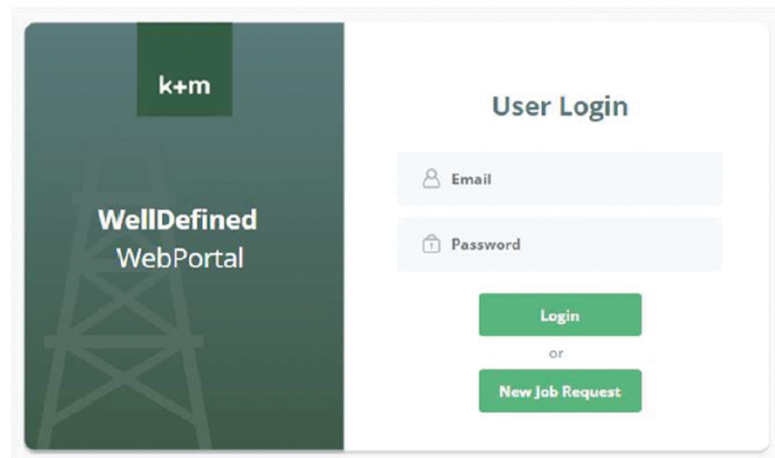

## BENEFITS

- Quick Turn-around time
- Direct Access to Survey Expert
- 24/7 Access from Rig or Town
- Real-time Communication
- Traceability

## FEATURES

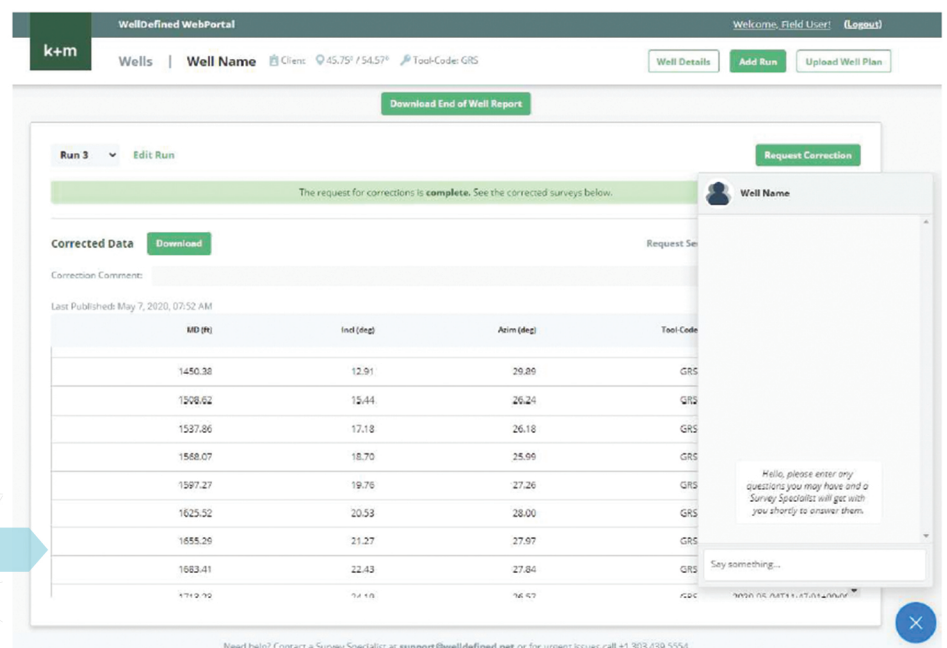

- Applicable to all MWD systems
- Multi-station compensation – axial and cross-axial
- SAG and BHA deflection correction
- Live Chat with Survey Expert
- Field initiated correction process
- Integrated Survey Management
- Report Access

The WellDefined WebPortal gives field users a seamless interface to the complex process of Survey Corrections. In addition, it allows 24/7 access for everyone involved in the drilling activity to the survey quality and correction updates in real-time. Direct communication with a live survey specialist to answer any questions or concerns regarding your specific wellbore is also available.

Fast, secure and easy to use interface to upload survey data and receive corrections, in a timely, reliable and traceable manner.

Provides quality indicators for each survey station to confirm the survey tool code assignments. This allows quick confirmation that surveys are meeting the wellbore positional requirements
